## What the market needs

As security awareness is increasing in Australia, property owners and managers require a more intelligent generation of security solutions.

**Instant warning to intruders**

**Reliable Push-notifications to Hik-Connect to alert property owner/manager**

**Unified APP to arm/disarm all security devices**

## Features of AcuSense Live-Guard Solution

### 01 AcuSense Technology

With built-in AcuSense technology, these cameras have the ability to distinguish humans/vehicles from other moving objects in a scene, and perform better than a PIR detector on false alarm reduction.

**Conventional VCA**  
(e.g. Basic Motion Detection)

Normal Camera CPU

Any moving object will trigger, causing a lot of false alarms.

**PIR Detection**

PIR Sensor

Sudden temperature occurs and animals movement can easily trigger false alarms.

**AcuSense**

Deep-learning algorithm

**Focus on Human and Vehicles**  
Reducing False Alarm by about 95%

### 02 Four functions within One camera

Conventional security cameras only provide evidence of the crime, whereas AcuSense live guard cameras are also equipped with a flashing light and pre-recorded audio which could be triggered immediately to warn the intruders off. At the same time, real-time alerts will be sent to the app. for prompt action.

PIR detector

Strobe

Siren

Camera

Acusense live guard camera

**Conventional solution**

Camera can only provide evidence after crime

**Hikvision solution**

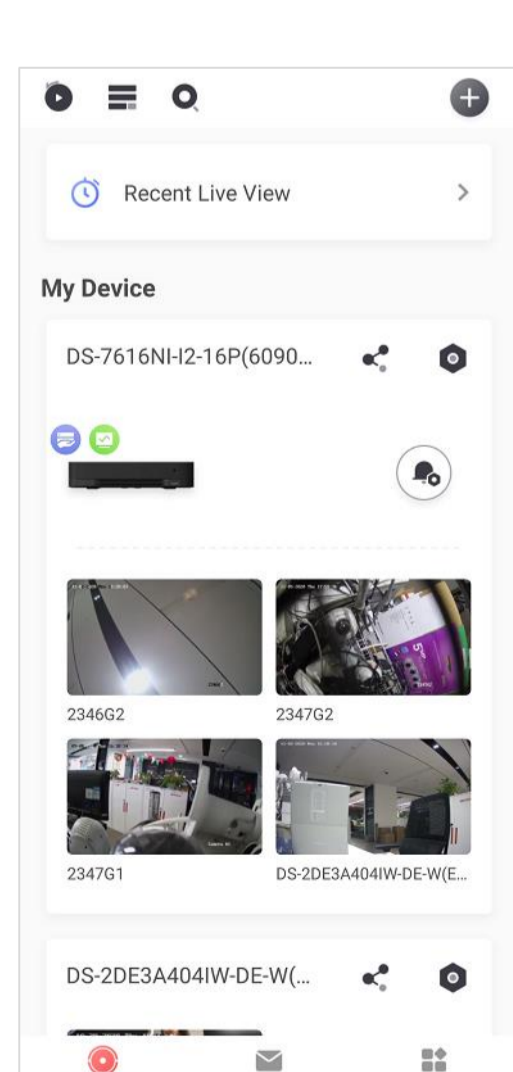

Strobe light and audio alarm for driving intruders away, real-time and efficient alerts for prompt action

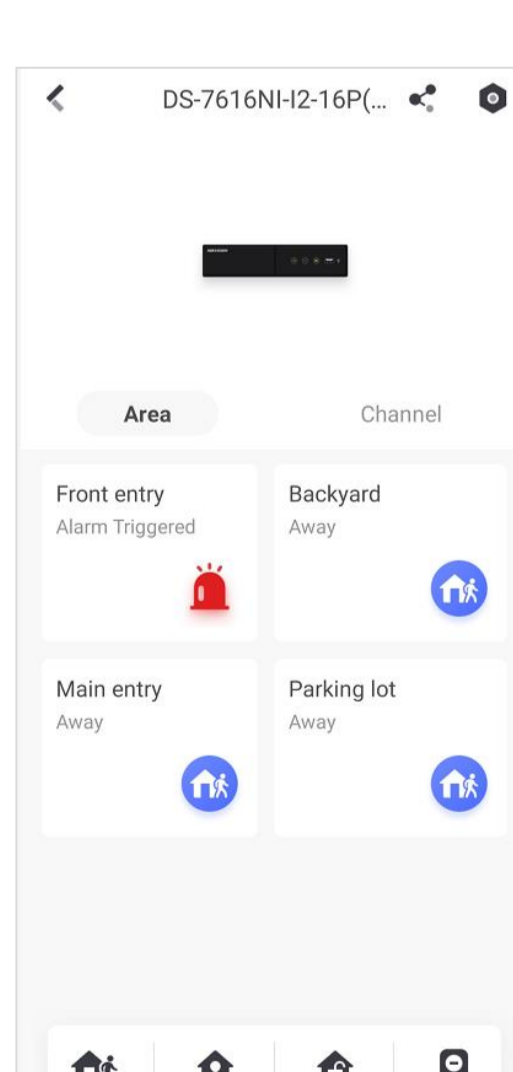

### 03 Unified APP to arm/disarm system

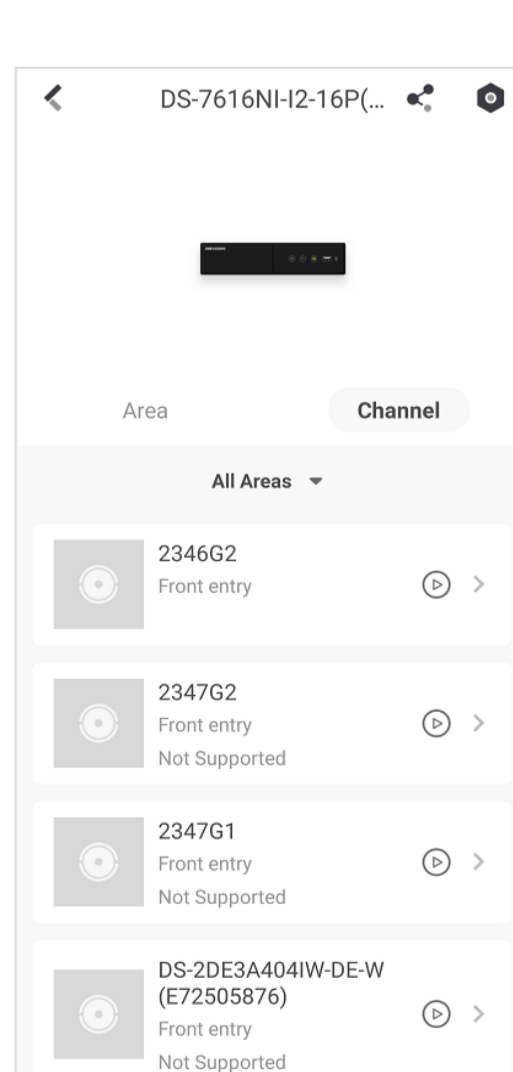

With the Hik-Connect APP, up to 4 alarm areas are supported. Away arm, stay arm and schedule arm modes make the system more flexible to use. Also, it supports arming our AX hub and the solution with one button via wired connection with the NVR alarm input interface.

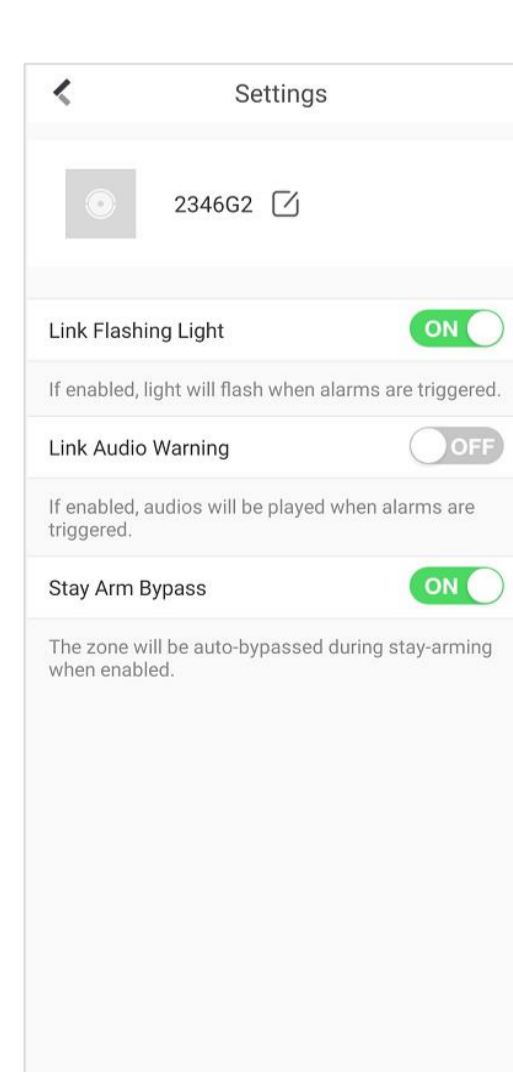

Click to use the solution

Up to 4 areas are supported to arm/disarm

All channels are listed, click one into setting page

Flashing light and audio warning are separately enabled. Camera can work at 'stay arm bypass' mode.
